

VIBtransmitter - Basic vibration monitoring modules

Devices from the VIBtransmitter series are designed for online condition monitoring and basic diagnostics of constant and variable speed rotating machinery (e.g. ventilators, pumps, compressors). It is an affordable solution for customers, who want to protect their facilities from serious failures. The series includes single channel, as well as multichannel devices.

[VIBtransmitter VT1002DK/DS/DP - Modules for reciprocating compressors monitoring](#)

The VT1002DK, VT1002DS and VT1002DP modules are specially modified versions of the VT1002D module, which are designed for condition monitoring of reciprocating compressors. Their design takes into account the specific nature of work of this type of equipment.
